Monograph “**Innovation Georgia: the Current Status**” by Joseph Gogodze,  
Senior Researcher of Techninformi,  
Ph.D. in Mathematics

<http://www.tech.caucasus.net/GEO/News/InnovGEO.pdf>

The monograph is based on the results of a research on the issues of innovative development carried at Techninformi in 2007-2012. The author has developed special statistical instruments that enable to evaluate the positioning of the innovative capacities of Georgia within the European and post-USSR countries' space, the heterogeneity of the innovative capacities of the Georgian regions, and the progress of clustering of enterprises. The book also provides a retrospective survey of Georgia's R&D system and describes the European experience in the area of the information support to the management of innovation processes.

The presented findings will be useful and promotional for further research and will assist government authorities in development and implementation of a knowledge-based and innovation-driven economic policy.
